

FOR IMMEDIATE RELEASE

Inventory Management is Simplified with Release of Faronics System Profiler

SAN RAMON, CA, September 15th, 2010 — Faronics, a global leader in cost reducing IT solutions and computer power management, announced today the release and immediate availability of Faronics System Profiler, a powerful inventory solution. By identifying and storing detailed hardware and software data for every workstation across a deployment, System Profiler enables organizations to simplify the management of computing environments, while helping to ensure license compliance, accelerate IT productivity, and minimize business risks.

System Profiler also offers vital information that can be utilized to analyze configuration drift for Faronics Deep Freeze customers, optimize Power Save Energy Consumption Profiles, and/or enhance Anti-Executable whitelists. System Profiler improves software asset tracking, provides the ability to effortlessly manage software upgrades, and helps ensure licensing compliance to reduce legal and financial risk.

Inventory information is stored in the central Faronics Core Database, so System Profiler can quickly identify workstations that match specified criteria, as well as run detailed reports on either present or historical hardware/software configurations. It is also an invaluable tool for determining changes in baseline computer configurations or diagnosing and troubleshooting technical problems.

“System Profiler saves valuable time and extra effort required to collect vast amounts of information required by network administrators. I appreciate that I can centrally identify the OS versions and installed service packs, number and characteristics of CPUs per computer, capacity and interface type of disk drives, last boot-up time, motherboard information and its on-board devices, installed applications and additional detailed information on Faronics software,” said Mohammed Ashkaibi, Technology Engineer for PRO TECHnology in Jordan. “I can also list computers requiring specific software or patches, make informed decisions on which computers need more RAM, page-file tuning, or system cleanup. System Profiler is an indispensable tool for every network administrator that really wants to see the whole picture.”

A free, fully functional 30-day evaluation version of Faronics System Profiler can be downloaded at www.faronics.com.

About Faronics

With a well-established record of helping businesses manage, simplify, and secure their IT infrastructure, Faronics makes it possible to do more with less by maximizing the value of existing technology. Our solutions deliver total workstation reliability, complete system control and non-disruptive computer energy management. Incorporated in 1996, Faronics has offices in the USA, Canada and the UK, as well as a global network of channel partners. Our solutions are deployed in over 150 countries worldwide, and are helping more than 30,000 organizations.
