DEEPFREEZEMAC™

Absolute System Integrity

Deep Freeze Mac with ARD Integration provides a completely non-restrictive working environment where there is no need to be concerned about system misconfiguration or malicious damage to a Mac OS X system; a simple restart eradicates all changes and ensures that the standard system configuration is available at all times. All changes to a machine are temporary for that working session, including installation of new software, removal of programs, and application preference configuration. The need for IT professionals to perform rebuilds, re-image, or troubleshoot computers is eliminated, resulting in a reduction in IT expenditures and an increase in computer uptime.
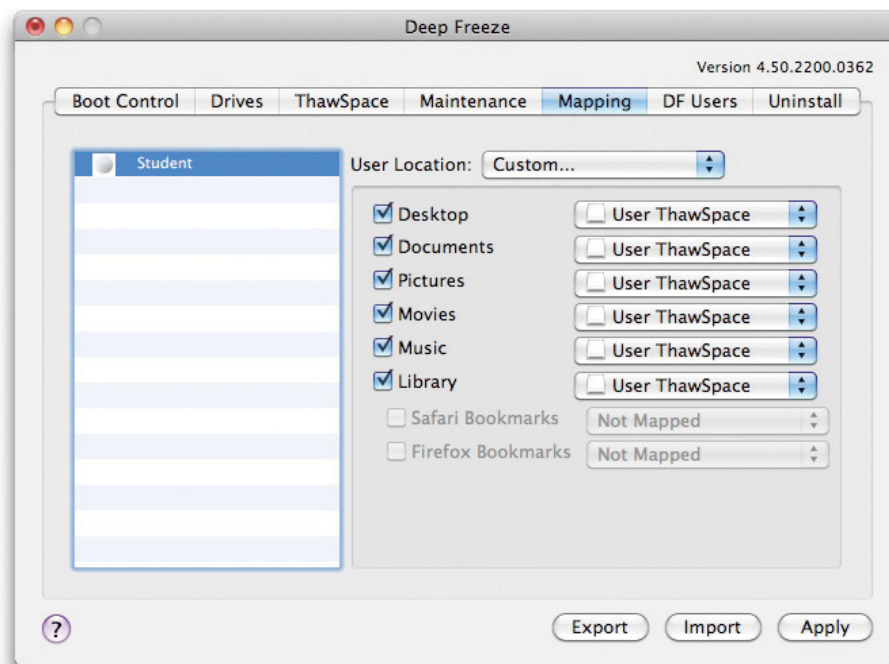

Deep Freeze Mac Benefits

- Provides IT administrators with the ability to deliver a clean and consistent workstation with each and every session
- Liberates IT personnel from tedious system repairs that arise from software corruption and user changes
- Allows users to benefit from an unrestricted yet trouble-free computing experience
- Enhances IT control over enterprise systems through network deployment and management capabilities
- Reduces the amount of time and money that organizations spend on IT repairs

"I have had teachers near retirement tell me they were ready to call it quits because of erratic and inconsistent computer software. Not until after last summer when Deep Freeze was installed did they finally remember why they liked to teach."

– Chuck Taylor, San Juan Unified School District, CA

Integrated Mapping makes it easy to save user data between restarts.

Key Features

Absolute Protection
- Guarantees 100% workstation recovery on restart
- Provides password protection and complete security
- Protects multiple hard drives and partitions

Configuration Options
- Supports multi-boot environments
- Customize user name and password
- Choose whether the Deep Freeze icon will appear in the menu bar
- Choose whether the hard drive icon will appear with the Deep Freeze badge

Control and Flexibility
- Use ThawSpace to designate global or user-specific spaces for retaining data
- Hidden ThawSpaces to protect individual user data from unauthorized access
- Dynamic, resizable ThawSpaces to allow for spur-of
- Selectively Freeze or Thaw fixed drives, volumes, or partitions
- Import or export configuration files to or from other Deep Freeze Controllers
- Use Deep Freeze Assistant to create customized installation packages with all desired options pre-configured
- Schedule multiple maintenance periods to automatically pull down persistent Apple Software Updates
- Add, delete, or resize Global and Individual ThawSpaces from within the ThawSpace tab
- Create ThawSpaces from 1 MB to 120 GB in size
- User specific ThawSpaces protect from unauthorized access

Dual-Boot Support
- Deep Freeze Mac will protect your entire Mac partition, including any virtual machines within it
- Deep Freeze for Windows can be used to protect Parallels, VMWare, Boot Camp, and Virtual PC environments

Retain User Data
- Choose from mapping entire accounts, or specific parts of a user account to a second partition or ThawSpace
- Account types include Admin, Standard and Mobile accounts

Integration and Compatibility
- Get enterprise-style capability with Apple Remote Desktop (ARD) integration
- Use Deep Freeze Assistant to install Saved Tasks for controlling all aspects of Deep Freeze in the ARD console
- Manage Deep Freeze Mac through the LANDesk® Management Suite console
- Use LDAP, Active Directory, and Open Directory accounts without limitation

Deep Freeze Mac won a Macworld 2006 Editors' Choice Award. The Eddy awards, as they are affectionately known, honor products that are useful and innovative while offering the best in terms of both quality and value. Deep Freeze Mac was awarded four-and-a-half mice out of a possible five in the June 2006 issue of Macworld magazine.

System Requirements

Deep Freeze Mac requires Mac OS X Tiger 10.4, Leopard 10.5, or Snow Leopard 10.6. Deep Freeze Mac is a Universal application (Intel and PPC compatible). ARD integration requires Apple Remote Desktop version 2.2 or later. A minimum of 256 MB of RAM is recommended.
