DEVICEFILTERMAC™

⊹ Essential Connection Control

Unregulated connectivity can cause a multitude of security, productivity, and policy challenges. Device Filter Mac solves this problem by enabling system administrators to effectively control device connectivity at an enterprise level. Anything from an iPod to USB drives to Bluetooth devices can be managed to prevent unauthorized data transfers or connections from taking place. Device Filter Mac offers seamless integration with Apple Remote Desktop, allowing administrators to deploy a customized device connectivity configuration package to multiple computers.
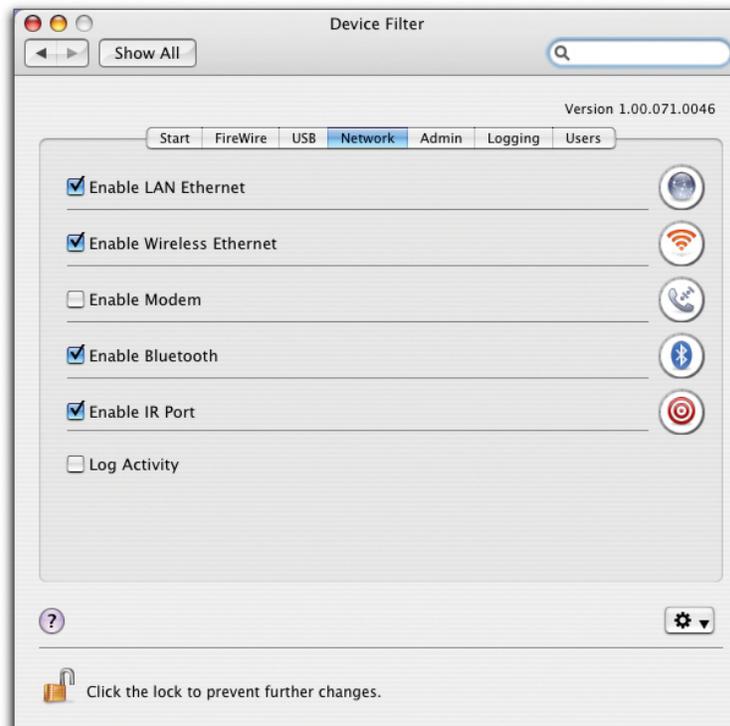

⊹ Device Filter Mac Benefits

- Empowers system administrators with enterprise-level control of workstation device connectivity
- Prevents unauthorized data transfers or connections from taking place
- Ensures a secure computing environment where all connectivity is regulated and logged
- Supports USB, CD, FireWire, Infrared, Bluetooth and Ethernet device control

"We use Device Filter Mac on our kiosks, and since installing it last year we haven't had to touch them since. Device Filter Mac ensures that nobody can walk away with any of the data held within our kiosk computers."

- Brad Eisenhaure, VP of Creative, Visual Image Display

Device Filter Mac delivers full control over Mac device connectivity.

Key Features

▪▸ Connectivity Management

- Designate which devices can be used:
  - Media players connected via USB such as iPods, PSPs, or other MP3 players
  - CD / DVD ROMs
  - Modems
  - Hard drives, key chain drives, cameras, or any other peripheral connected via USB or FireWire
- Specify how devices connect:
  - USB / FireWire
  - Infrared
  - Bluetooth
  - Ethernet
  - Wireless

▪▸ Configuration Flexibility

- Create pre-configured installation packages with the Device Filter Mac Assistant for deployment to multiple workstations
- Assign constraints to filter devices or network connections based on capacity
- Remain up-to-date with "Check for updates" feature

▪▸ Security and Control Options

- Utilize password protection options
- Assign permanent, temporary, or one-time-only authorizations
- Enforce capacity restrictions on connected peripherals
- Monitor and log device use over time and view usage reports
- Allow one-time device mounting
- Allow time-limited device access

▪▸ Integration and Compatibility Features

- Compatible with Mac OS X 10.3 (Panther), 10.4 (Tiger) and 10.5 (Leopard)
- Get enterprise-style capability with Apple Remote Desktop (ARD) integration
- Utilize command line scripts to integrate Device Filter with any management tool
- Localized in English, French, German, Japanese, and Spanish

Administrators are able to customize the access levels of connected devices.
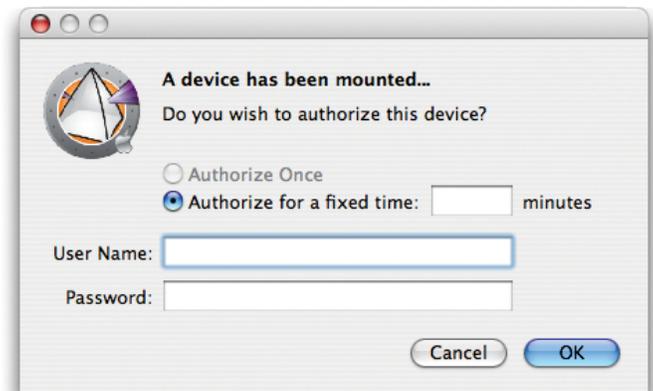

Device Filter Mac allows for one-time and time-limited device authorization.

▪▸ System Requirements

Device Filter Mac requires Mac OS X Panther 10.3 or Tiger 10.4, and is a Universal application (Intel and PPC compatible). ARD integration requires Apple Remote Desktop version 2.2 or later. A minimum of 256 MB RAM is recommended.
