## **Info Security Products Guide Names Faronics Anti-Executable Winner of the 2011 Global Excellence in Anti-Malware Award**

SAN RAMON, CA, February 18th, 2011 — Faronics announced today that Info Security Products Guide, the industry's leading information security research and advisory guide, has named Faronics Anti-Executable a winner of the 2011 Global Product Excellence Awards in the Anti-Malware category. These prestigious global awards recognize security and IT vendors with advanced, ground-breaking products and solutions that are helping set the bar higher for others in all areas of technologies.

More than 50 judges from a broad spectrum of industry voices from around the world participated and their average scores determined the 2011 Global Excellence Awards Finalists and Winners. Winners were announced during the awards dinner and presentation on February 16, 2011 in San Francisco attended by the finalists and judges.

Anti-Executable ensures total endpoint security by preventing zero-day, targeted attacks, and morphing viruses along with unauthorized applications from executing or installing. With approximately 20 million new malware samples created in 2010, relying solely on one security solution is no longer enough. An application whitelisting solution such as Anti-Executable provides an additional layer of protection to the standard anti-virus solutions to effectively secure an IT environment.

"Info Security Products Guide's recognition of Anti-Executable further validates our products as excellence-in-class and ahead of the curve," said Carlos Santamaria, Product Manager for Anti-Executable. "This industry honor is the greatest endorsement to the fact that Anti-Executable is ahead of the curve when it comes to the best-of-the-best products that can provide superior malware protection."
