Faronics Anti-Executable Now Logs Acceptable Use Policy Violations

SAN RAMON, CA, February 28, 2006 — Faronics has just released Anti-Executable version 2.2 in both Standard and Enterprise editions, with new and improved features. With its unique whitelist technology, Anti-Executable standardizes any environment by preventing all unauthorized or unwanted programs from installing or running.

Faronics Anti-Executable 2.2 now has a central logging feature, which keeps a record of each and every executable violation occurrence, including details such as user, date and time, and the unauthorized application trying to run or install at the workstation. The central console in the Anti-Executable Enterprise version offers the capability to view a workstation log centrally from the Enterprise Console by selecting one or many machines at the same time. The log file can be sorted and all or selected records can be exported for future reference; administrators can now easily see which users or computers are attempting to violate Acceptable Use Policies.

Improved features in version 2.2 include an option in the Exempted Folder feature to include all subfolders recursively in a directory, as well as an option in the Trusted Applications feature to include all executables recursively within a specified directory.

Upon install, Anti-Executable does a deep scan of a computer and places all installed applications on a whitelist. From that point forward, any executable that is not on this whitelist is deemed unauthorized and will never run or install. Administrators are given control and flexibility through the option to authorize specific applications as needed. Anti-Executable protects systems against malware and day-zero attacks by blocking all unwanted executables.

Fully functional evaluation versions of Anti-Executable Enterprise and Standard are available at www.faronics.com.

About Faronics

Faronics develops and markets intelligent utilities for absolute control of multi-user computing environments. Faronics' market-leading solutions ensure 100% workstation availability and have dramatically impacted the day-to-day lives of thousands of information technology professionals and computing lab managers. Our user-driven, powerful technology innovations benefit educational institutions, libraries, government organizations and corporations.
