

FOR IMMEDIATE RELEASE

Deep Freeze Protects Vista With Absolute System Integrity

SAN RAMON, CA, March 12, 2007 — Faronics is excited to announce that Deep Freeze 6.2, the latest version of Faronics' flagship system integrity software, is now available. The launch of Deep Freeze 6.2 with full support for Windows Vista marks a new milestone for Faronics, as Vista users can now enjoy the same rock solid 'reboot-to-restore' concept that over 5 million workstations worldwide have depended on for years. In fact, Microsoft has certified Deep Freeze 6.2 with their official "Works with Windows Vista" designation.

Deep Freeze instantly protects and preserves original computer configurations, eliminating routine IT maintenance while allowing complete, unrestricted workstation access. Regardless of the changes made to a workstation, simply restart to reset the computer to its original state. The result is a protected system, free of viruses and unwanted programs. Since Deep Freeze's 'reboot-to-restore' process does not increase startup times whatsoever and does not impact system resources, it triumphs over competing system restoration technologies, which require both user initiation and system downtime.

"Faronics is committed to providing intelligent solutions for home, corporate, and education environments," said Brent Smithurst, Vice President of Technical Operations for Faronics. "We are extremely proud of the fact that Faronics has once again proven itself to be the industry leader by being the first to provide absolute system protection to Windows Vista users."

A fully functional, 60-day evaluation version of Deep Freeze can be downloaded free of charge at www.faronics.com for both the Windows and Mac platform. An Enterprise edition is also available, which offers centralized deployment and management options for large computing environments.

About Faronics

Faronics develops and markets intelligent utilities for absolute control of multi-user computing environments. Faronics' market-leading solutions ensure 100% workstation availability and have dramatically impacted the day-to-day lives of thousands of information technology professionals and computing lab managers. Our user-driven, powerful technology innovations benefit educational institutions, libraries, government organizations and corporations.
