FOR IMMEDIATE RELEASE

## **Power Save 2.0 Debuts at Interop Las Vegas 2008's Energy Camp**

SAN RAMON, CA, April 28, 2008 — Just in time for Interop Las Vegas 2008's Energy Camp, Faronics is happy to announce the much-awaited release of Power Save 2.0! This latest release of Faronics' non-disruptive computer energy management software now introduces Windows Vista support, a new enterprise console, and enhanced reporting capabilities. As a show exhibitor and participant of the conference dedicated to the reduction of information technology's global carbon footprint, announcing Power Save 2.0 at Energy Camp is a natural fit. Interop takes place at the Mandalay Bay Convention Center in Las Vegas, April 28–May 2, 2008.

Power Save makes computer energy management that is non-disruptive to IT and end-users a reality. It provides tangible financial savings to organizations by reducing computer power consumption, and proves its rapid return-on-investment through enterprise-wide tracking and reporting. By strengthening IT control over network systems while promoting user productivity at all times, Power Save enables IT to achieve feasible environmental responsibility that is easy to deploy and manage, and is the only computer energy management solution that analyzes CPU, disk, keyboard, mouse, and application activity before taking power management actions. On average, Power Save provides organizations with a savings of \$25 per computer, per year, for every computer deployed.

Power Save 2.0 is the first Faronics product to be controlled on an enterprise-level by the newly released Faronics Core Console. Core Console's MMC3 platform has enabled numerous improvements to take place in Power Save, including enhanced reporting capabilities powered by SQL Express, advanced Wake-On-LAN support, the ability to run on 64-bit computer systems, and a standardized Microsoft User Interface that IT administrators are already familiar with.

"We're excited that Faronics is offering solutions to climate change with Power Save at Interop's Energy Camp," said Lenny Heymann, General Manager for Interop. "Interop is happy to have companies such as Faronics take an active role in Energy Camp, where IT professionals and solution providers are coming together to make green IT happen."

A free, fully functional 30 day evaluation version of Power Save can be downloaded from [www.faronics.com](http://www.faronics.com) for both Windows and Mac computers. Power Save users with a valid maintenance package can download this latest version from Faronics Labs, Faronics' customer care portal.

### **About Faronics**

Faronics delivers software products that manage, simplify, and secure IT environments. Recognized as an ENERGY STAR partner, Faronics is also a member of the Climate Savers Computing Initiative, a non-profit group dedicated to developing, deploying, and adopting smart technologies that improve the efficiency of a computer's power delivery and reduce the energy consumed when the computer is in an inactive state.

### **About Interop**

Interop drives the adoption of technology, providing knowledge and insight to help IT and corporate decision-makers achieve business success. Part of TechWeb's family of global brands, Interop is the leading business technology event series. Through in-depth educational programs, workshops, real-world demonstrations and live technology implementations in its unique InteropNet and InteropLabs programs, Interop provides the forum for the most powerful innovations and solutions the industry has to offer.
