## Institute E. Majorana

Faronics Deep Freeze protects 400 PCs at Institute "E. Majorana" in Grugliasco, Italy

The computer network of the Institute Majorana consists of more than 400 computers available for students.

A network of this size, and the high level of use, needed constant and ongoing maintenance by the IT staff.

Mr. Dario Zucchini, Head of Technological Innovation at the Institute Majorana, tells us about his experience: "With a network of over 400 computers and the constant users shift, the management had become difficult and ongoing maintenance activity was very demanding."

- Reduced maintenance
- Centralised management
- Centralised management

"Since September of 1999, when we began using Faronics Deep Freeze, things have totally changed for the better at the Institute Majorana"

"The first installation of DeepFreeze took place in 1999 on a first batch of about 50 computers. Since then, Deep Freeze has allowed the Institute to virtually eliminate all the problems associated with maintenance, repair and configuration of personal computers, thus improving the service offered to students and teachers."

With this solution, we don't need to replace our computers after only a few years (which means saving a lot of money, at least € 6,000 per classroom per year), we are not paying for technical assistance (we know of schools investing a lot for technical maintenance and tance) and we have also saved about subscribing unnecessary software. Before Deep Freeze, we used hardware based solution to protect our computers, but that solution needed physical installation and maintenance itself! So Deep Freeze was really a god-send"

"The machines protected by DeepFreeze work more quickly and smoothly just because there is no unnecessary software performance penalty (especially in the older machines), and even the new PCs do not suffer for any decrease in performance over time, because they are not burdened with continuous updates of the operating system, applications, the presence of excess temporary files, errors in the log file, and so on. Thank you Faronics, thank you Deep Freeze!"

"In many schools, a lot of time is invested to invent the strangest solutions to reuse obsolete PC and increase the reliability of them at work, not knowing that the problem has already been solved and the final settlement has existed since 1999. It's called Deep Freeze, and we're proactively working to communicate this to other schools, spreading the news and helping them to introduce Deep Freeze in their labs"

"With DeepFreeze we do not need to replace our computers which means saving at least € 6,000 per classroom per year"
