Ernesta Stoppa - Giuseppe Compagnoni

Faronics protects ISIPT Stoppa Compagnoni in Lugo 250 workstations always as new, free from viruses, malware, spyware and maintenance with DeepFreeze Enterprise

Mr. Pier Fausto Verlicchi is the IT manager at Istituto Stoppa Compagnoni he shares his experience with Deep Freeze:

The Network of the Istituto Stoppa Compagnoni is populated with 250 computers, divided in 15 computer labs. Such a number of computers and the complexity of the network with its high level of usage, needed continuous and frequent maintenance activities by the IT Staff.

- Reduced maintenance
- Centralised management
- Centralised management

The Implementation of Deep Freeze Enterprise on every machine in the network allowed to virtually eliminate the problems related to maintenance, configuration and restoration of the personal computers, resulting also in improved and more efficient service given by the IT staff to the entire student and teacher community.

DOTFORCE

“Having 250 computer to manage, with continuous changes made by users, was really a difficult task. We had to go through daily maintenance activities, and we were observing the degradation of the performances in our computers.

“Then we installed DEEP FREEZE enabling the computers to be run in their optimal state and configuration faster and smoother”

The machines now work in a faster and smoother way, since there’s no unnecessary software penalizing their performances and causing potential conflicts and our new machines do not degrade their performances with time and after heavy usage: fragmented hard drives, “dirty” registry entries.”

BENEFITS:

- 1- With DEEP FREEZE we said goodbye to long overtime hours dedicated to the tuning and to restore functionalities of our computers.
- 2- We are now able to completely standardize the configuration of personal computers, giving all users a consistent work environment.
- 3- With the Deep Freeze Console we can now centrally manage all workstations, decide which ones to “thaw” to install the new software, without the need to physically be at that specific computer.
- 4- Teachers can now fully concentrate on teaching, they always find their computer lab fully functional. the students cannot compromise the integrity of the workstations.

CONCLUSION :

“The use of DeepFreeze makes us very satisfied and happy, and we would like to recommend it to all schools, trusting that they would be enthusiast about the unique features of this innovative software.”

“With DeepFreeze we are able to eliminate all the costs related to the management, customization and configuration. In fact, with DeepFreeze, to have a computer running like new, simply restart it!”
